

## Growing Pains

Growing pains are common among children. As many as one in five children experience some degree of this real, but quite harmless muscular pain during early years. Growing pains are most prominent between the ages of 3-5yrs and 8-11yrs. The most common complaints include limb pain that has started for no real reason. Sometimes pain may occur after exercise, but this is not always the case as children often experience just as much discomfort without any physical activity.

### Symptoms

Most children tend to experience pain in the legs, particularly the thighs, calves and behind the knee. Pain episodes can occur as frequently as nightly through to weekly or monthly. Complaints of pain are most common in the late afternoon and evening and can often affect the child's sleep with pain usually gone by morning. Children may also experience other forms of discomfort such as headaches during an episode of growing pain.

### What can you do?

The diagnosis of growing pain is one of elimination. Growing pain will not normally stop your child from walking or running and will not make them feel unwell. If they are limping, avoiding activity, are generally unwell or have pain in only one limb or joint it is possible that they may have a more serious injury or illness that should be investigated. Although there is no 'cure' for growing pain, managing the short term discomfort is relatively easy:

- reassure your child that the pain will go away and that they will feel normal by morning
- a warm heat pack or warm bath can ease the discomfort by relaxing affected muscles
- gently massaging the painful area can relax the child and help with the pain
- simple analgesics such as paracetamol can also help.

### What can physiotherapy do?

There are some other more serious conditions that can mimic the symptoms of growing pain, such as infections, viruses and juvenile arthritis. It is therefore important to have your child assessed by a physiotherapist to rule these out. Once your child has been cleared of other conditions and a diagnosis of growing pain has been made, a physiotherapist can assist with managing your child's pain while eliminating other pain factors.

To have your child assessed by one of our Physiotherapists, please contact us on (02) 4647 3373.
